All Image Module

The feature image gets so small while everything else gets so big when it goes to mobile

It would be nice to have an option without copy where the image fills the entire area on mobile.

While seeing these in mobile have the option to have the image either on top of copy or under copy

Function more like featured left image on mobile. Image gets larger and copy flows underneath it.
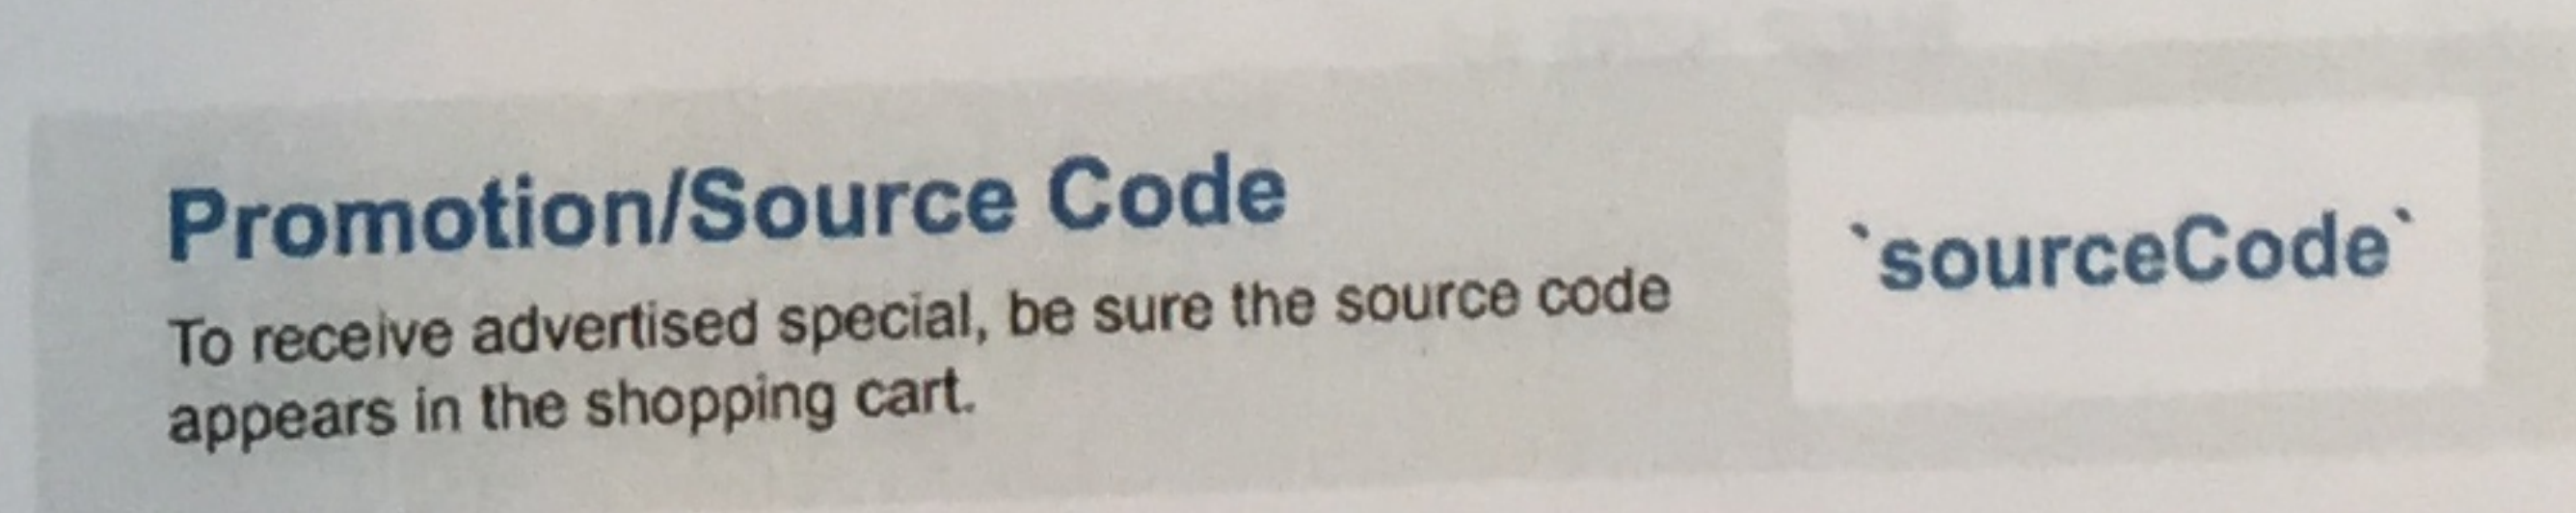

3 DAYS LEFT!

Urgent Banner

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Donec nec ante felis. Etiam convallis, eros non auctor

Rarely ever use this. May be nice if instead of a background image it would just be a color block under the 3 Days Left.

We've already turned this into just a graphic image so it doesn't get so huge when in mobile. Would there be a way to have it be text based and do the same?

AS SEEN ON TV

Could the images get bigger or have an option for two across and three across with the same fields
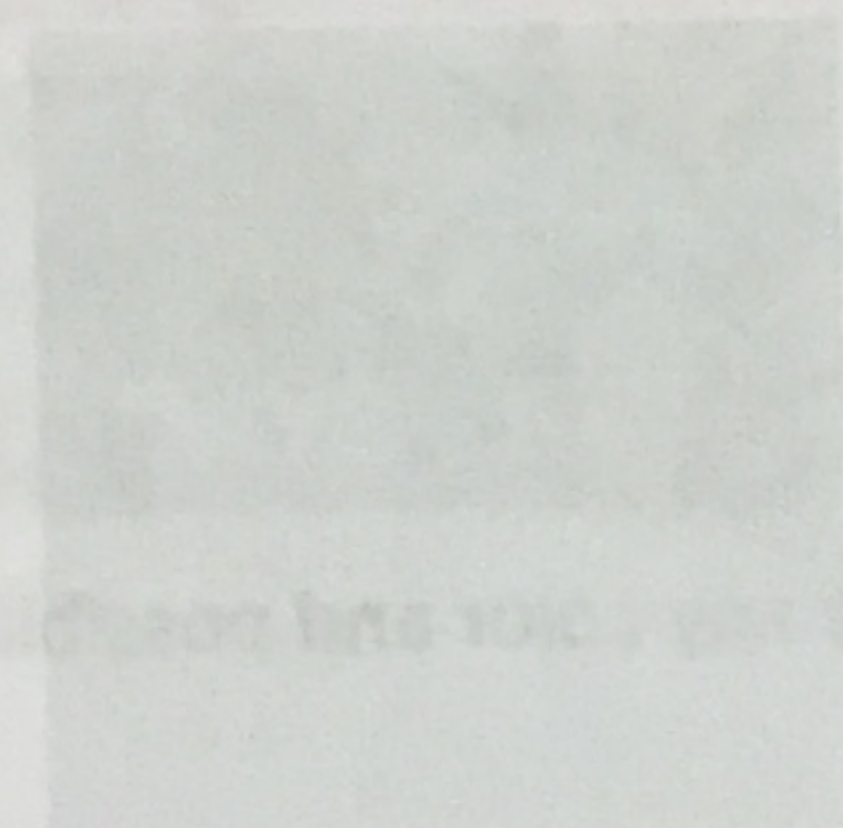

Too much spacing between products, would rather have images bigger and more space for copy.

Increase spacing on mobile between top row text and bottom row images

Center on mobile

Have a module that functions with the new code that Alyssa created where if you have six images only they stack 2 x2 in mobile. Maybe have the option to go 2x2 or 1x1 in mobile as well?

Clean up spacing issues between copy blocks. Currently they run into each other.

Sometimes we remove the copy and just have image, name, CTA. The only way we can get this all to center correctly is if we add breaks in the name. So if this could be fixed.
